

Getting to Know U.S. Taxpayers: Selected Tax Data by Occupation and Industry, Tax Year 2005

*Terry Nuriddin, Mary Jezek, and Mario Fernandez,
Internal Revenue Service*

Our main objective was to help meet the research community's need for demographically profiled statistical data by providing industry codes and occupation codes for taxpayers in the Statistics of Income (SOI) Division individual income tax sample data files.

IRS's history of publishing taxpayer occupation data began with its first publication on statistics for Calendar Year 1916. The statistics published for "Personal Returns" included income distributions by occupation (1918 Statistics of Income, p. 7). A little more than 50 years later, the IRS began conducting independent and joint studies to determine the reliability of tax return occupation data.¹ By late 1979, the IRS had concluded that the individual tax return could be a dependable resource for occupational data (Koteen and Grayson, 1979).

In the early 1980s, the SOI Division announced the impending arrival of tax data by occupation classification (Sailer, Orcutt, and Clark, 1980). Having realized the potential benefit in obtaining the Form W-2 (Wage and Tax Statement) wage data for each taxpayer and in "creating a computerized dictionary of occupation titles," SOI envisioned the possibility of providing the research community with an occupational data supplement for the basic individual program. These data would be derived from a database comprised not only of tax return data but also demographic information such as occupation classification, industry sector, gender, "and possibly ... age and race" for each taxpayer (Blacksin and Plowden, 1981, p. 586).

SOI pursued creating the database throughout the 1980s, reporting periodically on its progress and employment-related research projects.² In the 1990s, SOI created "a more elaborate database" for Tax Year 1993 (Sailer and Nuriddin, 1999, p. 33). The database's demographic content was

¹ These research experiments were conducted during the 1960s and 1970s, and results were reported in the series of notes for the Linked Administrative Statistical Sample Project sponsored by the Social Security Administration.

² Suggested readings include:

expanded to include an occupation code and industry code for each taxpayer. SOI ended the century with an offer for the research community to use the enriched administrative database (Sailer and Nuriddin, 1999).

Data Design

The File—Tax Years 2003, 2004, and 2005

We decided to merge the SOI Taxpayer Industry and Occupation Study (OCC) files with an abridged version of the corresponding SOI Individual Sole Proprietorship (INSOLE) files for the most recent tax years available for both files. The INSOLE file is a stratified probability sample of individual income tax returns. Sampling information for these tax years can be found in the respective IRS Publication 1304.³

The industry codes in the OCC files are assigned using the Employer Identification Number (EIN), or the employer's name from the Form W-2.⁴ (See Figure 1.) Over time, improved technologies have enabled SOI to implement extensive validation procedures. SOI can now generate industry codes by matching the EIN or business name to an Industry Coding Dictionary (ICD). SOI has developed several ICDs by compiling valid sets of an EIN or business name and the associated industry code. The ICDs use industry data from previously industry-coded OCC files, partnership files (based on Form 1065), and charitable organization files (based on Form 990). After applying an industry code to the OCC file, SOI validates it using a current NAICS Codes listing.

⁴ Overall, the basic processing for the OCC files in this project is similar to the process described for Tax Year 1993 in the 1999 paper by Sailer and Nuriddin. For Tax Year 1993, industry codes were based on the 4-digit 1987 Standard Industrial Classification (SIC) Codes. These SIC Codes were converted to 1997 6-digit North American Industry Classification System (NAICS) Codes. The 1997 NAICS Codes were subsequently updated to 2002 NAICS Codes. The industry data in this paper are based on the 2002 NAICS Codes.

Once the industry coding is completed, the Standard Occupation Classification (SOC) Codes are generated.⁵ In the OCC file, the occupation codes are based on taxpayers' occupation entries as reported on the Form 1040. (See Figure 2.) For all Form 1040 returns sampled, the first 20 characters of the occupational title as reported in the "Your occupation" box are extracted from the tax return. This information denotes the occupation of the primary taxpayer. For those returns filed jointly by a taxpayer and his or her spouse, the first 20 characters of the occupational title entry in the "Spouse's occupation" box are also extracted. This entry denotes the occupation of the secondary taxpayer.

To assign an occupation code, these taxpayer occupation titles are then matched to those title entries already in the Master Occupation-Coding Dictionary (MOD).⁶ Occupation titles not matching to the MOD are researched

⁵ SOI also uses an "other occupation" category to classify nonworking taxpayers (such as "STAY AT HOME DAD"); working taxpayers whose jobs cannot be determined from the text provided (such as "W-2 EMPLOYEE"); and INVESTORS, a category not included in traditional employment tabulations.

⁶ The MOD is a repository comprising taxpayer occupational entries edited from tax returns and assigned occupation codes during previous processing years. For tax years in this research project, the MOD contains the 2000 Standard Occupation Classification (SOC) Codes and the SOI codes assigned to denote investors, unclassified persons, non-labor force groups, and deceased persons. It also contains the 2002 North American Industry Classification System (NAICS) Codes and the SOI code assigned to an unclassifiable entity.

Figure 2: Resource Document for SOC Code

Sign Here Your signature <input type="text"/> Date <input type="text"/> Your occupation <input checked="" type="checkbox"/> <small>Under penalties of perjury, I declare that I have examined this return and accompanying schedules and statements, and to the best of my belief, they are true, correct, and complete. and then subsequently assigned an occupation code. (See Sailer and Nuriddin, 1999, for more details.) After generating occupation codes, SOI validates the file using a current SOC Codes listing.

To test the quality of the OCC file once occupation and industry classifications have been assigned to each taxpayer in the sample, SOI compares the IRS employment data estimates to those produced by the Bureau of Labor Statistics (BLS).⁷ Using these practical standards for comparisons, SOI has found the IRS employment data to be reasonable (Sailer and Nuriddin, 1999).

The Methodology

The new datasets comprise fixed-length records containing 35 selected variables from the INSOLE file, 14 variables from the OCC file, and 6 generated indicator fields that represent data quality checks for the merge procedures. We also overlap selected INSOLE and OCC variables to measure data quality. About 60 percent of returns in each dataset comprise nonjoint returns, representing primary taxpayers.⁸ On joint returns, the taxpayers decide which spouse will file as primary or secondary.⁹

⁷ For Tax Year 2005, the BLS occupation data (SOC Code) reference would be the online Statistical Abstract Table No. 602. Employed Civilians by Occupation, Sex, Race, and Hispanic Origin: 2005 at <http://www.census.gov/prod/2006pubs/07statab/labor.pdf>. The BLS industry data (NAICS Code) reference would be the BLS employment estimates derived from the Current Employment Statistics survey data available for creating customized at <http://data.bls.gov/cgi-bin/dsrv>.

⁸ Non-joint returns include taxpayers who file as single, married filing separately, head of household or surviving widow(er). Joint returns represent married taxpayers filing jointly.

⁹ The decision to file as the primary or secondary taxpayer on Form 1040, has not always been left to taxpayers filing joint returns. The space for the secondary taxpayer occupation was introduced on the 1954 individual tax return to be used by either the wife or husband of the taxpayer. The following year it was designated for wives and remained so until 1967 when the term was changed to "spouse." Except for reverting back to "wife" in 1972, the secondary space has been designated for the spouse since that time.

Additionally, because the OCC file contains data from Form W-2 information documents, which are reported on an individual basis, we are able to compare the primary taxpayer and the secondary taxpayer wage data to the tax return wage data obtained from the salaries and wages line on Form 1040. Using the gender code on the OCC file, we can evaluate wage data for males and females categorized as primary or secondary taxpayers.

This article focuses on the dataset for Tax Year 2005. Tax return items shown in the tables are classified by the occupation classification and industry sector of the primary taxpayer. This is true for both non-joint and joint returns.

Using the gender code and the wage data from Form W-2, we have found that the gender composition of these employees appears to have been split at about 49 percent female and 51 percent male for Tax Year 2005. Interestingly, the W-2 wage data for males show that they earned 63 percent of total wages reported during this time. We have also been able to observe the predominately female and male occupation classifications and the predominately female and male industry sectors as shown in Figure 3 and Figure 4.

(All figures are estimates based on samples.)

Summary

Our main objective for this paper was to report on a new SOI dataset, which merges the SOI taxpayer industry and occupation file with an abbreviated version of the SOI individual sample file. In the course of doing this, we encountered several challenges and opportunities. Through our file analyses, we identified and corrected minor data anomalies.

The tabulations presented in this paper are designed to provide preliminary results of tax return data within the framework of occupation and industry categories of primary taxpayers. The tables provided show all returns filed by occupation classification or industry sector of the primary taxpayer. The non-joint return detail for these presentations is also provided.

These introductions should provide an interesting first look at tax filers in Tax Year 2005.

During our research efforts, we have discovered new data relationships to explore, and we plan to continue our analyses of the datasets. This new framework for examining tax return data by using the taxpayer occupation and industry categories should be helpful to the research community.

Table 1: Tax Year 2005, All Returns: Selected Sources of Income and Tax Items, by Occupation Classification of Primary Taxpayer¹—Continued

(All figures are estimates based on samples. Money amounts are in thousands of dollars.)

Footnotes

[1] For joint returns, the occupation classification is based on the primary taxpayer. For example, if the primary taxpayer lists his or her occupation as "police officer" (coded in Service Occupations), and the spouse is not classified in the same category, the return will be classified in the Service Occupations.

[2] Standard Occupation Classification (SOC) Codes at the major level (two-digit level) in high-level aggregation:
 Management, Business, and Finance Occupations (11 and 13); Professional Specialty Occupations (15, 17, 19, 21, 23, 29) and Education, Training, and Library Occupations (25) and Arts, Entertainment, Sports, and Media (27); Service Occupations (31, 33, 35, 37, and 39); Sales and Office (41, 43); Natural Resources, Construction, and Maintenance (45, 47, 49); Production, Transportation, and Material Moving (51, 53); and Military Specific Occupations (55); and Investors (92 - Statistics of Income (SOI) Division only). SOI undclassified occupations include Government and private employees whose jobs cannot be determined (97); self-employed persons whose jobs cannot be determined (8850); and Form 1040 occupation lines which are left empty (8855) or filled in with indiscernible data (88). SOI nonlabor force codes include retired and disabled persons (93); unemployed persons (9350); volunteers (9390); house spouses and homemakers (94); and students (95). SOI code 96 represents deceased taxpayers. For further information, visit the Bureau of Labor Statistics at www.bls.gov/soc.

NOTE: Detail may not add to totals because of rounding.

Table 2: Tax Year 2005, All Returns: Selected Sources of Income and Tax Items, by Industry Sector of Primary Taxpayer¹—Continued

(All figures are estimates based on samples. Money amounts are in thousands of dollars.)

Footnotes

[1] For joint returns, the industry sector is based on the primary taxpayer. For example, if the primary taxpayer's industry sector is "Government" and the spouse is not in Government, the spouse's wages will be classified in Government.

[2] North American Industry Classification System (NAICS) Code at the industry sector level (two-digit level): Natural Resources and Mining (11 and 21); Construction (23); Manufacturing (31, 32, and 33); Trade (42, 44, and 45); Transportation (48 and 49 except U.S. Post Office 491), and Utilities (22); Information (51); Financial Activities (52 except Federal Reserve Banks 521) and Real Estate (53); Professional and Business Services (54, 55, and 56); Education (61 - private) and (923110 - public) and Health Services (62); Leisure (71) and Hospitality (72); Other Services (81); Government (92 except 92310 and including 491 and 521); Military (928); and Unclassified - SOI only (989999).

For further information visit the U.S. Census Bureau at www.census.gov/eos/www/naics.

NOTE: Detail may not add to totals because of rounding.

Footnotes at end of table.

Table 3: Tax Year 2005 All Returns: Number of Returns Using A Paid Preparer, by Occupation Classification of Primary Taxpayer¹

(All figures are estimates based on samples.)

Footnotes

[1] For joint returns, the occupation classification is based on the primary taxpayer. For example, if the primary taxpayer lists his or her occupation as retired (coded as Non-labor Force) and the spouse is not, the return will be classified as as Non-Labor Force.

[2] Standard Occupation Classification (SOC) Codes at the major level (two-digit level) in high level aggregation: Management, Business, and Finance Occupations (11 and 13); Professional Specialty Occupations (15, 17, 19, 21, 23, 29) and Education, Training, and Library Occupations (25) and Arts, Entertainment, Sports, and Media (27); Service Occupations (31, 33, 35, 37, and 39); Sales and Office (41, 43); Natural Resources, Construction, and Maintenance (45, 47, 49); Production, Transportation, and Material Moving (51, 53); and Military Specific Occupations (55); and Investors (92 - SOI only). SOI unclassified occupations include government and private employees whose jobs cannot be determined (97); self-employed persons whose jobs cannot be determined (8850); and Form 1040 occupation lines which are left empty (8895) or filled in with indiscernible data (88). SOI nonlabor force codes include retired and disabled persons (93); unemployed persons (9350); volunteers (9390); house spouses and home-makers (94); and students (95). SOI code 96 represents deceased taxpayers.
